Abstract

As we all know, it is important to prepare the young generation that is growing up today, who can perfectly learn foreign languages, who can speak fluently in the foreign language they are learning, to penetrate the culture of the peoples of the world by learning foreign languages, and to create personnel who meet the specified requirements. training is one of the goals and objectives of the educational reform in our country. Also, how important it is to know foreign languages, the reform of the system of teaching foreign languages in the field of education, the use of advanced teaching methods in the educational process using modern pedagogical and information and communication technologies is also one of the urgent issues. In the conditions of rapidly developing information and communication technologies, which are one of the unique features of our time, special attention is paid to a new approach to the educational process and its organization using its opportunities. In particular, the article mentions that teaching foreign languages to future foreign language teachers on the basis of modern media technologies will increase the effectiveness of the lesson.

Keywords: interactive educational platforms, language learning applications, translation tools, modern and traditional players, speaking in a foreign language, computer, Internet, pedagogical technology, innovative technology, methods, media technologies.

After our country gained independence, Uzbekistan began to build a democratic life from the first years of independence. Economy also became important. The weight of the implemented reforms increased from year to year. Not only fundamental reforms, but many changes have taken place in other aspects, including the

education system. In particular, interest in teaching foreign languages has increased and many conditions have been created for young people. The main goal of this is to increase the level of knowledge of young people and increase their interest in foreign languages. As our first president Islam Karimov said, "Currently, the study of foreign languages is given great importance in our country. There is no need to overestimate the importance of perfect knowledge of foreign languages for our countries, which are striving to take their rightful place in the world community today, and for our people, who are building their great future in solidarity and cooperation with our foreign partners. In particular, as a continuation of these ideas, the Presidential Decision "On measures to further improve the system of teaching foreign languages" was adopted on December 10, 2012. This decision further expanded the opportunities to learn foreign languages. Today, the demand for foreign languages is increasing. [Methodological Journal of the Ministry of Public Education, 2019.53]

Most people in today's rapidly developing world can speak two or more languages. In terms of languages, some languages are easier to learn, some are more difficult to learn, and this requires some time and effort from people. But I also think that any language can be learned with a little effort and dedication. From today's point of view, as a result of the reforms in the study of foreign languages, the young generation who are entering language learning, from pre-school education to higher education, learn by comparing their mother tongue and a foreign language at the same time. It is in linguistics that this method is one of the best ways to accelerate students' learning and achieve a positive and effective result. Because the student who is learning a language has studied his mother tongue in depth, this thing is much more useful, and if he learns a comparison of his mother tongue and a foreign language at the same time, this has been tested over the years and is an effective method, and learning foreign languages through current modern technologies is one of the most effective and convenient methods. This method is one of the methods of language learning that is available for people of all ages. This is being implemented in accordance with Resolution No. 312 of May 19, 2021 on effective organizational measures aimed at popularizing the study of foreign languages.

Currently, the textbooks and instructional manuals presented in order to fundamentally apply the field of education in our country to foreign languages are a practical proof of this goal. Therefore, only a student who is interested in his mother tongue and has studied it thoroughly can learn it with love for other

languages. Also, from the point of view of attention to language learning in our country, unprecedented things have been done in the last 5-10 years, and they have brought it to the level of politics and replaced it with foreign languages. a number of decisions and decrees on learning have been developed, in particular, under the chairmanship of our president Shavkat Mirziyoyev, a video conference dedicated to improving the system of learning foreign languages was held. it was emphasized about the introduction. Now, instead of continuous traditional teaching methods, it is possible to organize lesson processes based on interactive methods using new ICT.

In turn, this is one of the modern methods of learning a foreign language in the developing world. Learning and teaching any foreign language using modern technologies is one of the most effective ways.

- You can watch and listen to foreign language video clips, shows, dialogues, movies or cartoons through a computer, phone, tablet, and audio.
- Audio programs in English or other languages can be heard and watched.
- Modern and traditional players can use tape recorders.
- Can be used for listening to CD players. The use of such technical tools helps learners to learn a foreign language more interestingly and effectively.

Educational technologies are effective and efficient use of modern technical tools in the educational process. In addition, it serves to increase the quality and efficiency of education by introducing modern innovative technologies into the educational process. A simple example of this is that a student can watch and listen to foreign language videos, movies or cartoons while using computers. In addition, learning using modern technologies does not make the student bored, learning only from books, manuals, and textbooks. The foreign language education system in Uzbekistan made a radical change, the desire to learn foreign languages, acting according to the proverb "Knowing a language - knowing" Our multilingual Farobi, with a wide observation at the level of comparative study of several languages It is an inheritance from our mature ancestors like Kashgari. Based on this, it is no secret to any of us that knowledge of foreign languages is a requirement for today's youth. By learning foreign languages on the basis of modern technologies, learning foreign languages is relevant and important in order to ensure the special place of our country Uzbekistan in the world community and to apply it more widely. The role of young people and the foreign languages they learn is invaluable in ensuring that

Uzbekistan gains its place among the nations of the world. To further strengthen this, the metaphor of language acts as a bridge.

Modern technologies, especially digital technologies, play an important role in foreign language learning of future foreign language teachers. These technologies improve the teaching and learning process, making it more convenient and effective.

Advantages of modern technologies in learning foreign languages:

➤ **Interactive learning platforms:** Virtual learning platforms and online courses provide language teachers with new opportunities to learn foreign languages. These platforms facilitate collaboration and personalized learning experiences.

➤ **Language Learning Apps:** Specific language learning apps provide comprehensive resources for practicing vocabulary, grammar, listening and speaking skills. They offer personalized learning paths and game features to motivate students.

➤ **Translation tools:** Translation services and automatic translation systems such as Google Translate help language teachers quickly translate texts from different languages. These tools provide immediate support and effective lesson planning.

Immersive Virtual Reality (VR) and Augmented Reality (AR): VR and AR technologies create immersive learning environments that mimic real-world language interactions. They provide an opportunity for language teachers to practice communication skills and strengthen cultural understanding.

Speech recognition and feedback tools: Speech recognition software and feedback tools help language teachers evaluate pronunciation and provide real-time feedback. These technologies can improve speech clarity and fluency.

Advantages of modern technologies for future foreign language teachers:

- **Enhanced Convenience:** Modern technology makes language learning more convenient, allowing teachers to learn anytime, anywhere.

- **Personalized learning:** Technology-enabled learning platforms allow educators to tailor the learning experience to their individual needs and learning styles.

- **Enhanced motivation:** Interactive and engaging technologies motivate and engage teachers in the learning process.

- **Improved communication skills:** Virtual communication tools and language exchange platforms allow teachers to practice communication skills and connect with native speakers.

- **Lesson preparation:** Modern technologies help future foreign language teachers develop the skills and knowledge necessary to effectively teach a language in the digital age.

Modern technologies cannot replace traditional teaching methods, but they can significantly improve the learning experience for future foreign language teachers. By using these technologies, teachers can improve their foreign language knowledge, improve their teaching skills and prepare themselves for the challenges of teaching foreign languages in the 21st century.

New information technologies create great opportunities for teaching foreign languages, and are gaining importance in the field of education and science in increasing the efficiency of learning and obtaining high-quality knowledge. It is known that in order to teach the subject based on the requirements of the times, not a single lesson on this subject should be held without the introduction of the teacher or the students. In accordance with this important decision, today, especially in foreign language classes, it has been analyzed more deeply. Our youth must first of all be able to compete with their foreign peers in order to adequately protect the country's honor at the world level. Today, competitions in various foreign languages, including German, and various interactive online and offline tests are held. There are many tests online for students from beginner to advanced, such as Telc and TestDAF.

When using information and communication technologies, the teacher must make a plan in accordance with state standards. In the lesson, information and communication technologies can never replace the teacher, but help him. Competent use of information and communication technologies and other pedagogical technologies is necessary according to the content of the lesson. The purpose of using information and communication technologies in the educational process is to enrich the lesson and provide didactic information that books cannot provide. Today, the introduction of advanced methods of teaching using modern pedagogical and information and communication technologies at all stages of the education system increases the interest of the modern generation in foreign languages, and in turn, their fluent acquisition of these languages. It is envisaged to fundamentally improve the system of training specialists, as well as to create conditions and

opportunities for them to achieve world civilization and to use world information resources more widely, and to develop international cooperation and communication. Effective use of modern information and communication technologies is important in consistent learning of foreign languages. It should be noted that one of these tools is an interactive whiteboard. These boards allow creative teachers to organize lessons in an interesting and innovative way and to easily explain topics of any complexity to students.

Also, in conclusion, it is worth mentioning that as a result of using not only innovative methods, but also modern media technologies in English lessons, students' logical thinking skills develop, their speech becomes fluent, and the ability to quickly and correctly answer is formed. Such methods and games make the student eager for knowledge. The student tries to prepare thoroughly for the lessons. This turns students into subjects of the educational process. The effectiveness of using different tables in the process of teaching foreign languages is also high. Using tables in the educational process, students can learn a certain grammatical rule, for example, making sentences using tenses, placing new words. At a time when the need to learn foreign languages is high, effective use of modern information technologies, media technologies, and innovative educational technologies in the educational process made this process effective. The effectiveness of innovative educational technologies lies in their correct and effective use in the educational process.
