Annotation:

At present, the government is paying great attention to the upbringing of children especially preschool education. The role of teachers, who have a direct influence on the family, the environment is invaluable in upbringing of the child as a future adult. The child first tries to express his interests in different colors of nature, the environment in his world. At this time, the people who help and support him are family members and, of course, educators.

Keywords: Fine arts, creativity, pedagogue, specialist, authority, pedagogical skills, attention, memory, education

Preschool education plays an important role in the upbringing of the child, because in the school age is a period when children are able to form self-awareness, express their personal opinions, express their interests. Ensuring the implementation of the Resolution of the President of the Republic of Uzbekistan dated December 29, 2016 No PP-2707 "On measures to further improve the system of preschool education in 2017-2021" on improving the education system Radical improvement of the level of preparation for education, the introduction of modern educational programs in the educational process, the provision of qualified teachers, the creation of conditions for the full intellectual, moral, aesthetic and physical development of children, the work on the formation of the technical base was considered an action plan for the implementation of the tasks set out in the project has been developed.

The task of pre-school education is to acquaint children with the rich national, cultural and historical heritage of the nation, to educate them spiritually and morally, to form in children in a sense of national patriotism. Timely development of the need for education, aspirations for learning in preschool children, their regular preparation for

the educational process, the formation of children's thinking, teaching them to express themselves independently and freely, ensuring the physical and mental health of children. a qualified educator is an important task facing educators.

The Preschool and Fine Arts program in the visual arts program aims to instill in children an aesthetic attitude towards their surroundings, creative ability, and the ability to express their thoughts in a child. In the process, children learn to work in a team and to control their own actions. Visual arts activities in preschool provide children with the skills they need to succeed in school.

Visual activities play an important role in preparing children for school. Acquiring knowledge and skills in painting, clay, and building materials will be the basis for successful school art and labor lessons. Prepares them for educational activities: teaches to listen to the teacher, to follow his instructions. One of the main reasons for this educational activity is to find the main and important solutions to the problem. Controlling one's own work in the process of visual activity also plays a role in the performance of tasks at school. The child is also psychologically prepared in the process of visual activity. Preparation of children for school is carried out in a preschool institution. In preschool, great emphasis is placed on drawing based on large group observations, as this is the first step in preparing children to draw based on nature. This thing develops visual memory in children, sometimes the subject helps the correct image as natural in children. Children learn to control their character and hand power in the free use of pencils and brushes in group art activities.

To acquire this skill, children develop the features of light, free, smooth movement of the hand. In the process of drawing objects of different shapes, sizes, different proportions, children learn the need to maintain direction, movement, movement in accordance with the length of the object, depending on the nature of the work of the object. The visual activities carried out in the preschool educational institution learn to use the material cleanly and systematically, to keep them clean, to use only the necessary materials, to plan the ways of their use, great attention is paid. This exercise develops attention, visual memory in children. In the preparatory group of kindergarten, depending on the nature, the requirements for drawing or painting increase, and these requirements approach the demand of the school. Children try to sketch the whole general form on paper to analyze nature, compare the picture to nature, correct mistakes and shortcomings, make it look like nature. Depending on the nature of the image, the sequence of work is carried out only at the initial stage of preparation and study in a

large group of preschool education. Constant use of the display makes children accustomed to working mechanically.

Conclusion

Another task of educators is to identify, shape and reveal the abilities and potential of children through modern fine arts. And the role of the educator here is invaluable. The educator must have deep knowledge and high skills, to work on it regularly, to constantly improve their scientific and theoretical level, to be modeled on world experience, not to be afraid to innovate. Because the younger generation is evolving day by day. Today is a time of advanced technology and new innovations. In this period, to penetrate into the hearts of growing souls, to motivate them to a lesson and to form it requires a strong pedagogical skill is required from the teacher.
